

REACH Inquiry

½ day workshop

The course is aimed at providing an understanding of the REACH Inquiry process. Every potential registrant of a non-phase-in substance (or a phase-in substance which has not been pre-registered), must inquire to ECHA as to whether a registration has already been submitted for the same substance. Similarly, a company is obliged to inform ECHA of the additional information that they would require for an update of a registration due to a tonnage band increase.

The course would provide an in-depth illustration of the various steps required for the preparation of an inquiry dossier, with emphasis on the regulatory aspects and on the key element of the dossier: the analytical characterization of the substance.

The course is delivered by renowned REACH experts with considerable experience in the preparation of inquiry dossiers and in the conduction of analytical strategies.

Topics to be covered:

- The Inquiry: what it is, the process, the costs
- Dossier preparation
- Substance characterization for common and exotic substances
- Tips for dossier preparation and submission

Date: Thursday 8th March 2012. 9.30am – 1.30pm.

Venue: Lancaster Environment Centre, Lancaster University, UK.
